

Triage is the first critical point of contact for patients in the emergency department. Join us for a collaborative and engaging conversation discussing the state of health care, a triage best practice didactic with real-world applications, and a medico-legal panel discussion that will give you a fresh, energized evidence and case-based toolkit to reinvigorate your personal practice approach to triage no matter the state of your emergency department.

LEARNING OBJECTIVES

- Discuss the current state of healthcare and the changes on the horizon.
- Review the core components of emergency department triage best practices utilizing a didactic case-based discussion of common emergency department triage and departmental throughput core issues impacting patients' timely and quality care.
- Discuss how current IES Physicians, apps, and hospital nursing partners have implemented triage best practice strategies to improve the quality of patient care in their emergency departments.
- Review the current medico-legal landscape surrounding triage "never events" and front-end best practices.

EDUCATION ATTENDANCE FOR QSP

To obtain Education Attendance credit for QSP, Physicians and APPs must complete a minimum of 4-hours of attendance at an IES-sponsored education event per year.

***Education Attendance for QSP applies to select locations. Contact your site practice administrator to confirm if this applies to your site.*
